**FOR YOUR OWN SAFETY, PLEASE READ THIS USER MANUAL CAREFULLY  
BEFORE POWERING OR INSTALLING YOUR CityLine 48 !  
Save it for future reference.**

This device has left our premises in absolutely perfect condition. In order to maintain this condition and to ensure a safe operation, it is absolutely necessary for the user to follow the safety instructions and warning notes written in this manual.

The manufacturer will not accept liability for any resulting damages caused by the non-observance of this manual or any unauthorized modification to the device.

Please consider that damages caused by manual modifications to the device are not subject to warranty.

## 1. Safety instructions

**DANGEROUS VOLTAGE CONSTITUTING A RISK OF ELECTRIC SHOCK IS PRESENT WITHIN THIS UNIT!**

Make sure that the available voltage is not higher than stated on the rear panel of the fixture.  
This fixture should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supplied, consult your authorized distributor or local power company.

Always disconnect the fixture from AC power before cleaning, removing or installing the fuses, or any part.

Do not overload wall outlets and extension cords as this can result in fire or electric shock.

Make sure that the power cord is never crimped or damaged by sharp edges. Check the fixture and the power cord from time to time.

Do not install the unit near naked flames.

During the operation the housing becomes hot (up to 80°C)

Refer servicing to qualified service personnel.

**This fixture falls under protection class I. Therefore this fixture has to be connected to a mains socket outlet with a protective earthing connection.**

Do not connect this fixture to a dimmer pack.

**LED light emission. Risk of eye injury.**

**Do not look straight at the fixture's LEDs during operation. The intense light beam may damage your eyes.**

Keep combustible materials at least 20 cm away from the fixture.

If the fixture has been exposed to drastic temperature fluctuation (e.g. after transportation), do not switch it on immediately. The arising condensation water might damage your device. Leave the device switched off until it has reached room temperature.

Avoid brute force when installing or operating the fixture.

The fixture was designed for both indoor and outdoor use. This fixture must not be used for underwater installation.

When choosing the installation spot, please make sure that the fixture is not exposed to extreme heat or dust.

Avoid using the unit in locations subject to possible impacts.

The fixture body never must be covered with cloth or other materials.

Only operate the fixture after having checked that the housing is firmly closed and all screws are tightly fastened.

Make sure that the area below the installation place is blocked when rigging, derigging or servicing the fixture.

Do not block the front objective LEDs with any object when the fixture is under operation.

The fixture becomes very hot during operation. Allow the fixture to cool approximately 30 minutes prior to manipulate with it.

Operate the fixture only after having familiarized with its functions. Do not permit operation by persons not qualified for operating the fixture. Most damages are the result of unprofessional operation!

Do not attempt to dismantle or modify the unit.

Please consider that unauthorized modifications on the fixture are forbidden due to safety reasons!

Please use the original packaging if the fixture is to be transported.

If this device will be operated in any way different to the one described in this manual, the product may suffer damages and the guarantee becomes void. Furthermore, any other operation may lead to dangers like short-circuit, burns, electric shock etc.

## 2. Fixture exterior view

- 1. Lens array
- 2. Cooler
- 3. Control board
- 4. Base

- 5. Power cord
- 6. LED modules supply connector
- 7. Antenna (wireless DMX version)
- 8. DMX In/Out

## 3. Installation

### 3.1 Rigging the fixture

The CityLine 4y8 can be rigged in any orientation on a truss without altering its operation characteristics.

Installation on the truss allows the mounting adapter (1) fastened to the fixture base with four bolts M8 (2) and the Omega holder (3) for fastening clamp. Pull through the safety rope (4) under the mounting adapter and over the trussing system.

For overhead use, always install a safety rope (4) that can hold at least 10 times the weight of the fixture. You must only use safety rope with screw-on carbine.

The cooler with LED area can be adjusted in range  $\pm 90^\circ$  (tilt) and  $\pm 50^\circ$  (pan).

**Ensure that the structure (truss) to which you are attaching the fixture is secure**

**Caution:** Fixtures may cause severe injuries when crashing down! If you have doubts concerning the safety of a possible installation, do not install the device and consult installation with an expert.

There is a possibility to install the LED module and the base separately on the truss. In this case, you need adapter CF (it is not standard part of delivery, must be order extra) for rigging LED module on the truss. The length of the connection cable between the base and the LED module has to be specified in order.

***If the LED module and the base are installed separately on the metal structure (LED module and the base are galvanic interconnected), the LED module falls under protection class I and must be grounded in accordance with all national and local electrical and construction regulations.***

In case that LED module and the base are installed separately on the insulant e.g. wall (LED module and the base are not galvanic interconnected), the LED module falls under protection class 3 and does not need to be grounded.

### 3.2 Connection to the mains

***Fixtures must be installed by a qualified electrician in accordance with all national and local electrical and construction codes and regulation.***

Install a suitable plug on the power cord, note that the cores in the power cord are colored according to the following table.

Core (Eu)	Core (US)	Connection	Plug Terminal Marking
Brown	Black	Live	L
Light blue	White	Neutral	N
Yellow/Green	Green	Earth	

**This device falls under class one and must be grounded!**

### 3.5 DMX 512 connection

The fixture is equipped with two 5-pin XLR connectors for DMX input/output. Only use a shielded twisted-pair cable designed for RS-485 and 5-pin XLR- connectors in order to connect the controller with the fixture or one fixture with another.

Wiring of the XLR connectors:

DMX output  
XLR socket (rear view):

DMX input  
XLR plug (rear view):

1 – Shield      2 - Signal (-)      3 - Signal (+)      4 – Not connected      5 – Not connected

#### To build a DMX chain

1. Connect the DMX output of the controller directly with the DMX input of the first fixture in the DMX chain.
2. Connect the DMX output of the first fixture in the DMX chain with the DMX input of the next fixture.

3. Always connect the DMX output with the input of the next fixture until all fixtures are connected. Do not overload the link. Max. 32 fixtures may be connected on a DMX link.

Caution: Terminate the link by installing a termination plug in the output of the last fixture. The termination plug is a male 3-pin XLR plug with a 120 Ohm resistor soldered between Signal (–) and Signal (+).

### 3.6 Master/slave connection

To build a master/slave-chain:

Connect the DMX output of the master fixture in the data chain with the DMX input of the first slave. Always connect output with the input of the next slave until all slaves are connected (up to 32 fixtures).

Caution: It is necessary to terminate the input of the master fixture and the output of the last slave with a 120 Ohm resistor in order to ensure the proper transmission on the data link.

### 3.7 Stand-alone operation

The fixtures on a data link are not connected to the controller but can execute pre-set programs which can be different for every fixture. To set the program to be played, see the "Stand-alone setting" (menu "**St.AL.**"). "Stand-alone operation" can be applied to the single fixture or to multiple fixtures operating synchronously. Synchronous operation of multiple fixtures requires that they must be connected on a data link and one of them is set as a master (master mode) and the rest as the slaves (slave mode).

To set the fixture as the master or slave, see the " Fixture Address " (menu "**A001**").

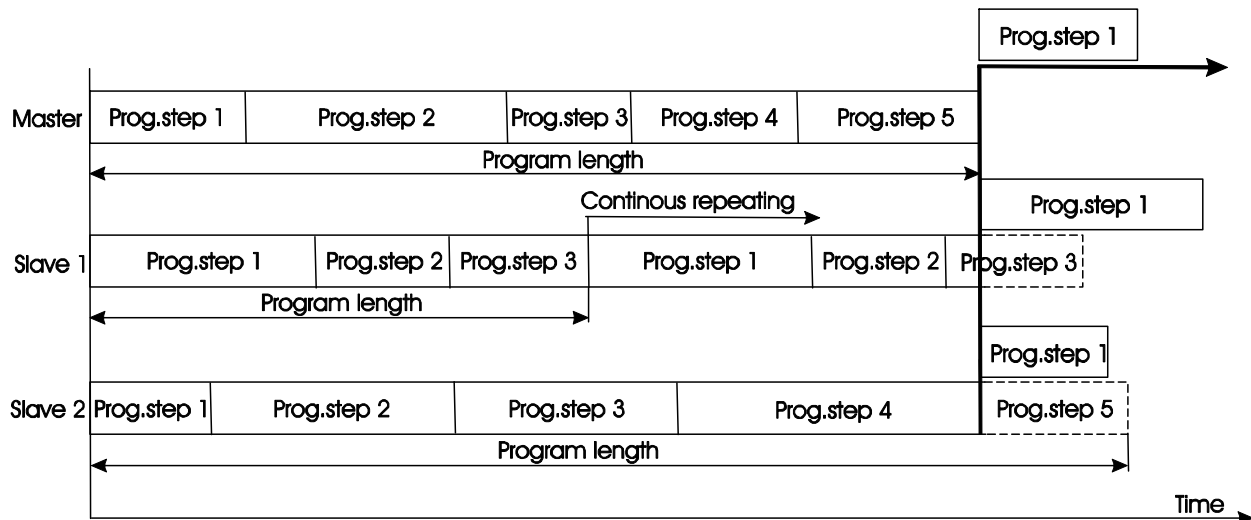

Only one fixture can be set as the master.

The master fixture starts simultaneous program start in the other slave fixtures. All fixtures have a definite, synchronized starting point when playing back their programs. The number of running program is the same in all slaves and depends on the master's choice (menu "**St.AL.**"). Every fixture runs its program repeatedly, starting the program step No.1 when requested by the master.

Example:

If the slave fixture has a shorter program length, it will continuously repeat its program until the master fixture finishes its own program and restarts its program running (slave 1- prog.step 3 will not be finished).

If the slave fixture has a longer program length, it will restart at prog. step 1 before it completes all its prog.steps (slave 2 - prog.step 5 will not be played)- see the picture bellow.

**Note:** Disconnect the fixtures from the DMX controller before master/slave operating, otherwise data collisions can occur and the fixtures will not work properly!

### 3.8 Wireless DMX operation

The wireless version of the City Line 48 is equipped with the Lumen Radio CRMX module and antenna for receiving DMX signal. CRMX module operates on the 2.4 GHz band.

1. Select wireless DMX input from the menu **PErS** (PErS-->dM.In.--> dM.UL.)

2. To link the fixture with DMX transmitter.

The fixture can be only linked with the transmitter by running the link procedure at DMX transmitter .

After linking , the level of DMX signal ( 0-100 %) is displayed in the menu item "**r.InF**" (SPEC-->rAdI.--> r.InF.)

3. To unlink the fixture from DMX transmitter.

The fixture can be unlinked from receiver via the menu item " **r.UnL.**" (SPEC-->rAdI.--> r.UnL.).

## 4. CityLine 48 - DMX protocol

Version 1.3

Mode/Channel					Value	Function	Type of control

## 6. Fixture menu

The control panel menu allows to set the fixture according to your needs, obtain information on its operation, test its various parts and lastly program it, if it has to be used in a Stand-alone mode.

The four control buttons on the front have the following functions:

- ↖ - **ESCAPE** button-leaves menu without saving changes.
- ↵ - **ENTER** button- enters menu, confirms adjusted values and leaves menu.
- ▲ - **UP** and ▼ - **DOWN** buttons - move between menu items on the same level, sets values.

After switching the fixture on, the fixture display shows the current DMX address:

Use the UP/DOWN buttons to scroll through the various menu items. To select desired item, press the ENTER.

### 6.1 Fixture Address

Use this menu to set the DMX address of the fixture or set the fixture as a Master (Slave).

**dM.Ad.** --- **DMX addressing.** Select this submenu to set a DMX start address.

To set a DMX address.

1. Use the UP/DOWN buttons to find “ **A001** ” menu.
2. Press the ENTER button.
3. Use the UP/DOWN buttons to select desired start address.
4. Press the ENTER button to confirm the choice.

**Note:** After switching on, the CityLine 48 will automatically detect whether DMX 512 data is received or not. If there is no data received at the DMX input, the display will start to flash with actually set address.

### 6.2 Fixture information

Use this menu to read useful information about the fixture status.

To display desired information.

1. Use the UP/DOWN buttons to find the “ InFo ” menu.
2. Press the ENTER button.
3. Use the UP/DOWN buttons to select the required menu item.
4. Press the ENTER button to confirm the choice.

**Po.ti.** --- **Power On Time.** Use the menu item to read the number of operation hours for each LEDs operating mode.

**totL** - the function shows the total number of the operation hours in the “FuLL” mode since the CityLine 48 has been fabricated.

**rESet** - the function shows the number of the operation hours that the CityLine 48 has been powered on in the “FuLL” mode since the counter was last reset. In order to reset this counter to 0 you have to press and hold the UP and DOWN buttons and at the same time press the ENTER button.

**DM.In.**---**DMX values.** Select this function to read DMX values of each channel received by the fixture.

**VErS.** ---**Software Versions.** Select this function to read the software version of the fixture processor.

## 6.3 Personality

Use this menu to modify the CityLine 48 operating behaviour.

**dM.Pr.** --- **DMX preset.** Select this menu item to set a desired DMX mode. Please refer to the chapter "DMX protocol" for detail description of each DMX mode.

Note: Selected DMX preset affects number of items in the menu "dM.In" and "MAn.M".

**dM.In.** --- **DMX input.** Select this menu item to select desired DMX input:

**dM.Ur.** --- Wire DMX.

**dM.UL.** --- Wireless DMX

**DiSP.** --- **Display adjusting.** This function allows you to change the display settings.

**d.On** --- this function allows you to keep the display on or to turn off automatically 2 minutes after last pressing any button on the control panel.

**d.Int.** --- select this function to adjust the display intensity (30-min.,100-max.).

**turn** --- select this function to turn the display by 180°.

**dotS.** --- **Pixels configuration.** The function allows you to set configuration of pixels.

**Find** --- this function checks all pixels and the message "donE" is displayed after the procedure.

**Sort** --- this function allows to assign to each pixel its desired position (DMX address) in the LED modules.

After entering "Sort", item "dt.l" ( dot 1) will appear. Press Enter and the position of dot 1 will start flashing. Use Up/Down buttons to select desired pixel position ("dP.1" – "dP.12"). Pixel position influences its DMX address-see pictures in examples below. Repeat the procedure for pixels 2-12. After setting positions for all pixels, select "Stor." to save current pixel sorting.

**Note: If message "nonE" appears in the menu "Sort", run " Find" function again.**

**Example 1 – Default (factory) pixel ordering-** pixels are sorted inline  
**DMX protocol - mode 2**

Position of flashing pixels "dt1-dt12" depends on ID of each pixel and can be different for different fixtures.

Example 2Example 3

If two or more pixels have the same pixel position ("dP.1-d.P12") they will have the same DMX address.

Only DMX channels 1-12 are used for control this pixel configuration. If all pixels have the same pixel position, the fixture will behave as one pixel.

**Upd. --- Pixels update.** Besides the main control electronics in the fixture base every pixel contains its own control driver. After standard software updating of the control electronics via the menu "SPEC", the pixels update has to be performed if some software changes are required in the pixel drivers.

**In.Po. --- Init effect positions.** Use this function to set all effects to the desired positions to which they will move after switching the fixture on (if DMX is not being received).

**C.C.Mo. --- Colour calibration mode.** If the function is on, the white output from the fixture (and also mixed colours) is more uniform. Each colour is dynamically corrected according to the value set in the menu "C.CAL" (SPEC-> C.CAL).

**dF.SE. --- Default Settings.** The menu item sets all fixture parameters to the default (factory) values.

## 6.4 Manual mode

Use this menu for control the fixture without DMX console.

Note: The number of items depends on the selected DMX mode in the menu "dM.Pr" (PerS->dM.Pr.)

## 6.5 Test sequences

Use this menu to run demo-test sequences without an external controller, which will show you some possibilities of using the CityLine 48.

## 6.6 Stand-alone setting

The fixture is not connected to the controller but can execute pre-set programs.

**Auto.** --- **Automatic playback.** This function allows you to select the program which will be played after switching the fixture on. Selected program will be played continuously in a loop.

1. Use the UP/DOWN buttons to find " **St.AL.**" menu.
2. Press the ENTER button.
3. Use the UP/DOWN buttons to select " **Auto**" item.
4. Press the ENTER button.
5. Use the UP/DOWN buttons to select desired program.
6. Press the ENTER button to confirm the choice.

**PLAY** --- **Playing program.** By enter to this menu a complete overview of all programs is offered, from which the program to be run can be selected.

1. Use the UP/DOWN buttons to find " **St.AL.**" menu.
2. Press the ENTER button.
3. Use the UP/DOWN buttons to select desired program.
4. Press the ENTER button. The selected program runs in a loop.

**Edit** --- **Editing a program.** The fixture offers 3 freely editable programs (PrG.1-PrG.3) each up to 32 steps. Every program step includes a fade time-the time taken by the step's channel status to reach the desired level and a step time-the total time occupied by the step in the program.

E.g. If "F.tim."=5 second and "S.tim."=20 second, effects will go to the desired position during 5 seconds and after that they will stay in this position for 15 seconds before going to the next prog. step

1. Use the UP/DOWN buttons to find " **St.AL.**" menu and press the ENTER button.
2. Use the UP/DOWN buttons to select " **Edit**" menu and press the ENTER button.
3. Use the UP/DOWN buttons to select a program you want to edit (PrG.1-PrG.3 and press ENTER button.
4. Use the UP/DOWN buttons to select a desired program step ("St.01" - "St.32") and press ENTER button.
5. Use the UP/DOWN buttons to select a channel you want to edit and press the ENTER button.

List of editable items:

"P.End" - a total number of the program steps (value 1-32). This value should be set before start Programming (e.g. if you want to create program with 10 steps, set P.End=10).

"rEd.1" - red pixel 1 saturation

"GrE.1" - green pixel 1 saturation

"bLu.1" - blue pixel 1 saturation

"Whi.1" - white pixel saturation

:

"rE.12" - red pixel 12 saturation

"Gr.12" - green pixel 12 saturation

"bL.12" - blue pixel 12 saturation

"Wh.12" - white pixel 12 saturation

"MACr" - colour macros

"Stro." - a strobe, shutter

"dinr" - a dimmer

"F.tim." - a fade time, (0-25.5) seconds

"S.tim." - step time, value (0-25.5) seconds

"COPY" - this item duplicates the current prog. step to the next prog. step. The item "P.End" is increased automatically.

6. Use the UP/DOWN buttons to set a DMX value of the channel and then press the ENTER button.
7. Use the UP/DOWN buttons to select next channel and press the ENTER button.
8. After having set all channels in the current program step, press the MODE button to go by one menu level back and select another program step.

## 6.7 Special functions

**rdML** --- **Code.** This menu item shows the first part of the RDM identification code.

**rdMH** --- **Code.** This menu item shows the second part of the RDM identification code.

**rAdI** --- **Wireless DMX.** The menu serves for reading of the wireless operation status (only for Wireless DMX version).

**r.InF.** --- **Wireless DMX information.** The menu item shows level of received signal in %. If the fixture is not linked to the transmitter, "no.LI" is displayed.

**r.UnL.** --- **Wireless DMX unlink.** The item serves for unlinking the fixture from transmitter

**C.CAL** --- **Colour calibration.** The menu serves for adjusting of LEDs saturation to achieve colour temperature of 5600K for white output.

rEd - a red LEDs saturation fine adjustment

GrEn - a green LEDs saturation fine adjustment

bLuE - a blue LEDs saturation fine adjustment

UhlT - a white LEDs saturation fine adjustment

Calibration of the colour saturations via the control board

1. Let the fixture lights one hour at R,G,B,W channels in full intensity.
2. Disconnect DMX controller from the fixture, open shutter and dimmer and set the Colour Macros channel to DMX=10 (white 5600K). Aim the light beam on the lux meter (e.g. Minolta CL-200 Chroma meter) which is placed at distance of cca 2.5 m from the fixture
3. Set the menu item "C.C. Mo." to On (PErS-> C.C. Mo -> On).
4. Enter the menu "C.CAL".
5. Use the [up arrow] and [down arrow] to find desired colour and touch it to enter the fine effect adjustment screen.
6. By means of the „rEd, GrEn, bLuE and UhlT“ items adjust the 5600K colour temperature as exactly as possible ( $\Delta u'v' = 0$ ).
7. After adjusting 5600K colour temperature, select „Stor“ to save all adjusted values and reset the fixture.

**uPd.M.** --- **Updating mode.** The menu item allows you to update software in the fixture via either serial or USB port of PC.

The following are required in order to update software:

- PC running Windows 95/98/2000/XP or Linux
- DMX Software Uploader
- Flash cable RS232/DMX No.13050624 (if you want to use a serial port of PC)
- Robe Universal Interface (if you want to use an USB port of PC)

Note1: Software update should execute a qualified person. If you lack qualification, do not attempt the update yourself and ask for help your ROBE distributor.

Note 2: DMX address, programs 1-3 and all items in the menu "PErS" will be set to their default values.

### To update software in the fixture:

#### I. Installation of the DMX Software Uploader.

1. DMX Software Uploader program is available from the ROBE web site at [WWW.robe.cz](http://WWW.robe.cz).
2. Make a new directory ( e.g. Robe\_Uploader) on your hard disk and download the software into it.
3. Unpack the program from the archive.

#### II. Fixture software updating.

1. Determine which of your port is available on your PC and connect it:
  - with the DMX input of the fixture if you using the flash cable RS232/DMX
  - with the DMX input of the Robe Universal Interface if you using the USB cable.

Disconnect the fixture from the other fixtures in a DMX chain. Turn both the computer and the fixture on. Make sure the lamp is switched off (only if the fixture involves a lamp).

2. Switch the fixture to the updating mode:
  - 1 Use the UP/DOWN buttons to find "SPEC." menu.
  - 2 Press the ENTER button.
  - 3 Use the UP/DOWN buttons to select "uPd." item.
  - 4 Press the ENTER button
  - 5 Use the UP/DOWN buttons to select "yES" option
  - 6 Press the ENTER button

Note: If you do not want to continue in software update, you have to switch off and on the fixture to escape from this menu.

3. We recommend to cancel all running programs before start of the Software Uploader.

4. Run the Software Uploader program. Select desired COM (or Robe Universal Interface) and then click on the Connect button.

If the connection is OK, click on the Start Uploading button to start uploading. It will take several minutes to perform software update. If the option "Incremental Update" is not checked, all processors will be updated (including processors with the same software version).

If you wish to update only later versions of processors, check the Incremental Update box.

Avoid interrupting the process. Update status is being displayed in the Info Box window.

When the update is finished, the line with the text "The fixture is successfully updated" will appear in this window and the fixture will reset with the new software.

**Note 1:** In the case of an interruption of the upload process (e.g. power cut), the fixture keeps the updating mode and you have to repeat the software update again.

**Note 2:** If software update involves also update of software for each pixel, run the item "Upd" In the "dotS" menu (PErS → dotS → Upd).

## 7. RDM

This fixture is ready for RDM operation. RDM (Remote Device Management) is a bi-directional communications protocol for use in DMX512 control systems, it is the new open standard for DMX512 device configuration and status monitoring.

The RDM protocol allows data packets to be inserted into a DMX512 data stream without adversely affecting existing non-RDM equipment. By using a special „Start Code,“ and by complying with the timing specifications for DMX512, the RDM protocol allows a console or dedicated RDM controller to send commands to and receive messages from specific moving lights.

RDM allows explicit commands to be sent to a device and responses to be received from it.

The list of commands for CityLine 48 is the following.

Parameter ID	Discovery command	SET command	GET command
DISC_UNIQUE_BRANCH	*		
DISC_MUTE	*		
DISC_UN_MUTE	*		
DEVICE_INFO			*
SUPPORTED_PARAMETERS			*
SOFTWARE_VERSION_LABEL			*
DMX_START_ADDRESS		*	*
IDENTIFY_DEVICE		*	*
DEVICE_MODEL_DESCRIPTION			*
MANUFACTURER_LABEL			*
DEVICE_LABEL		*	*
SENSOR_DEFINITION			*
SENSOR_VALUE			*
DISPLAY_LEVEL		*	*
DEVICE_RESET		*	
DMX_PERSONALITY		*	*
DMX_PERSONALITY_DESCRIPTION			*
STATUS_MESSAGES			*
STATUS_ID_DESCRIPTION			*
DEVICE_HOURS			*

Please, see the Robe Universal Interface user manual for detail description of RDM operation.

## 8. Technical specifications

### Power supply

- Electronic auto-ranging
- Input voltage: 100 - 240V AC, 50-60 Hz
- Fuse: T 5A
- Power consumption: 120W max.

### Optic & Effects

- Light source: 12 x Cree MC-E RGBW multichip
- Optical system: 25°
- RGBW colour mixing
- Built-in colour macros
- Adjustable strobe sequences
- White colour balance adjusting

### Electronics

- Control panel: 4-digit LED display and four control buttons
- Control: USITT DMX 512 (RDM support)
- DMX protocol modes: 5 (4,48,52,8,2 controll channels)
- Operations modes: DMX, Stand-alone, Master/Slave
- Manual control of all effects via control panel
- 3 user editable programs each up to 32 steps

### Wireless DMX/RDM module (only for Wireless DMX version)

Compliance with USITT DMX-512 (1986 & 1990) and 512-A  
Full DMX fidelity and frame integrity  
Auto sensing of DMX frame rate and frame size  
<5ms DMX latency  
Operational frequency range of 2402-2480 MHz  
Producer: LumenRadio

### Strobe

- Strobe effect with variable speed (max. 20 flashes per second)
- Pre-programmed random strobe pulse-effects

### Dimmer

- Smooth 16-bit dimming from 0 - 100 %

### Connection

- DMX data in: 1.3m long cabel with 5-pin XLR (male)
- DMX data out: 1.3m long cabel with 5-pin XLR (female)
- Power: 1.2m long power cabel without plug
- LED module supply: 1x Chogori CGRBB-03RFFS-SC8001 (female) and 1 x Chogori CGRBB-03BMMA-SL8001 (male)

### Rigging

- Via omega holder

### Temperatures

- Maximum ambient temperature: 40° C
- Maximum housing temperature: 80° C

## CityLine 48

### Dimensions (mm)

### Weight

- 6.5 kg

### Protection factor

- IP 65

### Included items

- 1 x CityLine 48
- 1 x Adapter for Omega holder (No. 99012673)
- 1 x Omega holder (No. 99010420)
- 1 x User manual

### Optional accessories

- Flash cable RS232/DMX (No. 13050624)
- Adapter CF (No. 1098 0107)

# CityLine 48

## Beam distribution

Distance (m)	2	4	5	6	8	10	12	14	Intensity (center) Lux/footcandles
Red	281/26	70/7	45/4	31/3	18/1.6	11/1	8/0.7	5/7	
Green	500/47	125/12	80/7	66/5	31/3	20/2	14/1.3	10/1	
Blue	75/7	19/1.7	12/1.1	8/0.8	5/0.4	3/0.3	2.1/0.2	1.5/0.1	
White	575/53	144/13	92/9	64/6	36/3	23/2	16/1.5	12/1.1	
R+G+B+W	1400/130	350/33	224/21	156/15	88/8	56/5	39/4	29/3	

### Illuminance distribution in X-axis

### Illuminance distribution in Y-axis

*Note: By reason of the fast-moving development of LED technology, more recent products may have better light parameters than previous products.*

## 9. Cleaning and maintenance

***DANGER !***  
***Disconnect from the mains before starting any cleaning or maintenance work***

Rinse off loose dirt with low pressure water spray. Wash the housing with a soft brush or sponge and a mild, non-abrasive washing detergent. Rinse it.

There are no serviceable parts inside the device.

Maintenance and service operations are only to be carried out by a qualified person.

Should you need any spare parts, please use genuine parts.

*Specifications are subject to change without notice.*

*October 11, 2011*
